(54) ISSUING SYSTEM FOR DIGITAL CONTENT AND ISSUING METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To prevent digital contents from being generated and reproduced unjustly.

SOLUTION: This system is provided with an IC card which has a holder for storing the digital contents and an executing part for executing a command on the digital contents, a command generating server which issues the command generating the digital contents and issues a generating right as an authority executing the issued command, and a content issuing server which acquires the command and generates the digital contents in the IC card by executing the acquired command. The command generating server is provided with a registering server data base which registers the content issue server acquiring the command to correspond to the the generating right. The command collates the generating right from the registering server data base every time the command is executed and generates the digital contents based on the collated result.
